Oil Chewing Microbes

chartmakers' world base maps, giving you two powerful, richly detailed location reference tools.

Add to these amazing features HD Ethernet radar, a powerful processor and graphics co-processor, and one of the coolest features of all; a quick connect data port. The G10 and G-12 are the only MFD's in the market to offer front-panel access to one USB device plus two SD memory cards for chart and waypoint access. The water-tight door locks out moisture for year after year of reliable marine performance.

For more information you can go online to www.GeoNavMarine.com to find the dealer nearest your location. More importantly the G10 and G12 will be on display at the BIG Seattle Boat Show in the East Hall at booth #1319.

One thing we've learned from last year is that you can never be too careful especially when it comes to being around the water. After all if Puget Soundkeepers will sue a group of boatyards that only contributed .03% of all the copper dropped into Puget Sound imagine what they might do to you if you accidentally hit the bilge pump switch and sent some oily water over the side. The fine could be many thousands of dollars and that could put a real dent in your cruising activity. Plus we also learned from the Gulf Oil disaster that dispersants might not be the best solution to the problem of oil in water.

Luckily for all us, our good friends at Z-Care have come up with what is pretty much an ideal solution to the problem described above. Remember, for it to be classified as an oil spill all that has to occur is for an oily sheen to appear on the water and trust us, it takes less than 1/2 ounce of oil for that to occur and all of a sudden you are responsible for

a clean-up.

So what Z-Care has done is formulated a bilge cleaner concentrate that relies on microbes that will eat the fuel and oil that tends to accumulate in the bilge and break it down through digestion into harmless carbon dioxide and water. This concentrate contains billions of microbes and while it will work best over the course of several days if you add it to the bilge by mixing it with water in a 10:1 ratio and let it sit for an hour, you'll be 99% done. Obviously, the best course of action is to periodically add some of the Z-Care Bilge Cleaner to the bilge and just let it do it's thing while you're away from the boat and if the bilge pump comes on automatically, you don't have to worry about getting one of those nasty phone calls.

You can also mix some up in a spray bottle and then spray down the bilge or any surface you suspect may be contam-

nated, let it go to work and then wipe the surface clean.

So before it's too late, stop by Fisheries Supply or go online to www.ZCare-Cleaners.com and order a couple of gallons of fine preventer. Or you can go to booth #605 in the East Hall and talk to the Z-Care guys and see the rest of their amazing product line.
